Education

The Chinese University of Hong Kong(Shenzhen) Shenzhen, China
MPhil in Computer and Information Engineering 2021 - 2023
Supervisor: Yeh-Ching Chung
GPA: 3.5/4.0
Thesis: A High Read Performance LSM-Tree Key-Value Store (Based on LevelDB)

Wuhan University of Technology Wuhan, China
B.E. in Software Engineering 2017 - 2021
GPA 4.0/5.0 10% top

Work Experience

Huawei Technologies Co., Ltd. Shenzhen, China Nov. 2023 - June 2026

- **Operating System Engineer (C/C++)**
  - **Linux Kernel Scheduler Maintenance and Heterogeneous Resource Management**
    - **EEVDF scheduler:** Tracked the upstream EEVDF scheduler, ran performance tests, and delivered internal training.
    - **Kernel stability:** Ported online/offline colocation features to Linux 6.6 and fixed deadlocks, hung tasks, and related issues.
    - **NPU reliability:** Built Checkpoint/Restore middleware for Ascend NPU training, solving driver state snapshot and multi-card topology recovery challenges; reduced 8x Ascend 910B recovery time from minutes to under 30 seconds.
- **Big Data Development (C++, Python, Java)**
  - Developed DFX features for a stream processing engine, including job management and automatic failure recovery.
  - Built metadata-service HA with one primary and multiple standbys based on ZooKeeper and etcd.

Project Experience

boxlite - an embedded agent sandbox (https://github.com/boxlite-ai/boxlite) 2025.12 - now

- Stability: implemented health checks with grace periods and retries; fixed full-path Shim exit capture; added virtualization preflight fast-fail checks.
- Compatibility: refactored the TAR engine to support PAX long paths and deferred hard links; added local Docker/Podman image loading for offline development.
- CI efficiency: added adaptive protoc version support and Rust toolchain pinning.

vhost-user devices in Rust on macOS and *BSD 2025.6 - 2025.8

- https://github.com/uran0sH/GSoC2025-vhost-user-bsd-macos
- Led the rust-vmm vhost-user port to macOS and FreeBSD: refactored event handling with mio, replaced Linux eventfd with pipe-based signaling, and designed platform-independent async primitives for cross-platform I/O multiplexing.

Technical Skills

- **Programming**: Rust, C/C++, Python, Go
- **Tools**: docker, shell, git, k8s
- **Focus**: OS, Database
